Focused on Teens, Health and Smart Choices

Parent Presentation:

Keeping Your Kids Safe In A Sex-Saturated Culture!

This 1½ hour presentation empowers parents with practical help, encouragement and skills to keep their children safe in world that bombards them with sex.

Parents should not buy into the myth that they lose their influence when their children enter the adolescent years! In fact, research shows that the kids who do avoid unhealthy, risky behaviors have been greatly influenced by their connectedness to parents, school and community.

The consequences of teenage sexual activity are much more severe than one generation ago. Teens today face life-altering consequences when they become sexually active.

Alarming statistics:

- About one in four sexually active teens acquires a sexually transmitted disease (STD) each year – that is about 8,000 per day.
- Chlamydia is responsible for 1/3 of infertility; females age 15-19 have the highest incidence.
- HPV (Human Papillomavirus), a sexually transmitted virus, causes 99.7% of pre-cervical cancer and cervical cancer. A Rutgers University report found 60% of 608 female students studied had HPV.
- Teenagers represent 10% of the general population, but 25% of those who contract STDs.
- There are over 20 significant STDs, many of which are viral, incurable and lifelong.
- An unwanted pregnancy changes a teen's life forever, regardless of the choice made.
- There is a tremendous emotional and psychological price that is paid by sexually active teens, as well as a greater chance of participating in other risky behaviors, such as alcohol and drug use, cigarette smoking, trouble at home and in school.

DON'T MISS THIS A VALUABLE OPPORTUNITY TO LEARN HOW TO PROTECT YOUR CHILDREN!
